

STEP 1:

Go to Azure DevOps
Login using microsoft account

STEP 2:

Create a new project

Project Name: SmartHomeEnergyTracker

Click Create

STEP 3:

Create a pipeline
Pipelines -> Create Pipeline

STEP 4:

Select the source
Example:
Choose github
Authorize access

STEP 5:

Select repository: smart-home-energy-tracker

STEP 6:

Choose the azure pipelines YAML file

Select: azure-pipelines.yml

Click Continue

STEP 7:

Click: Run Pipeline

Azure DevOps will now:

- create VM
- install Python
- install libraries
- run script
- generate CSV
- publish report

STEP 8:

After pipeline finishes:

Pipelines -> Runs

Open latest run.

STEP 9:

Go to: Artifacts

Download: WeeklyEnergyReport, AlertReport

Inside you will get: weekly_energy_report.csv, alert_report.csv
