

Step1:

Go to this website

<https://killercoda.com/playgrounds/scenario/ubuntu>

Step 2:

Run the code in the terminal

```
>> docker run -d -p 8080:8080 --name airflow apache/airflow standalone
```

```
>> docker ps
```

```
>> docker logs airflow
```

Step 3:

Copy the username 'admin' and password from the log

Go to menu at top right, then click traffic/ports

Click on port 8080

Enter the username and pswd

You'll see the dashboard

Step4:

Run the following in the same terminal

```
>> docker exec -it airflow bash
```

```
>> cd /opt/airflow/dags
```

```
>> cat > first_dag.py
```

Sample:

Paste the following as the content of file and press enter, then ctrl+D

```
from airflow import DAG
from airflow.operators.python import PythonOperator
from datetime import datetime
```

```
def task1_function():
    print("Task 1 Started")
```

```
def task2_function():
    print("Task 2 Running")

def task3_function():
    print("Task 3 Completed")

with DAG(
    dag_id="first_training_dag",
    start_date=datetime(2025, 1, 1),
    schedule="@daily",
    catchup=False,
    tags=["training"]
) as dag:

    task1 = PythonOperator(
        task_id="task1",
        python_callable=task1_function
    )

    task2 = PythonOperator(
        task_id="task2",
        python_callable=task2_function
    )

    task3 = PythonOperator(
        task_id="task3",
        python_callable=task3_function
    )

    task1 >> task2 >> task3
```

>> ls

You must see first_dag.py

Step 5:

>> exit

>> docker restart airflow

Wait for 2 minutes

Now go to dashboard -> go to dags in the left -> run the dag using the play button
